CEDIA 2010 MEDIA ALERT

Pakedge to Feature New, Patented Wireless Connectivity Solutions and Other Innovative Products at CEDIA 2010

At CEDIA 2010, Pakedge will be featuring a host of useful new products designed to make the lives of custom-installation, systems integration and security system professionals easier.

Pakedge has just been awarded the industry's **first-ever patent for an in-ceiling wireless access point design**. The new **WAP-C3G and WAP-C3N in-ceiling wireless access points** are the first products to include this innovation, providing increased wireless range and reliability along with expanded installation and connectivity options.

The new **WAP-W5N and CTL-W5N access point/system controllers** finally solve the roaming issue that can cause problems with all touchpanels. No other company offers this type of high-power, virtual cell, a/b/g/n wireless connectivity solution.

The **WAP-W3G and WAP-W3N wireless access points** provide a host of benefits, including high data throughput, flexible mounting options, VLAN capability, multiple SSID support and more.

Pakedge will be exhibiting a wide variety of **gigabit Ethernet switches and Power-over-Ethernet switches** with up to 24-port capacity for each, and versatile features specifically designed to meet the needs of custom home theater, multiroom audio/video, home networking, security and other critical applications.

WHERE: **Booth 4345**, Georgia World Congress Center, Atlanta, GA

WHEN: Please visit during show hours: Thursday, September 23 – Sunday, September 26, 2010. You may also schedule an appointment to visit the room.

WHO: Victor Pak, president and CEO of Pakedge, Dusan Jankov, executive vice president and other key people will be on hand to give you the news about the innovative Pakedge solutions on exhibit.

CONTACT: **Frank Doris / Public Relations**
