Spiral Groove Displays Its Revolution Ultrahigh-End Turntable In the VTL Booth At CES 2016

BERKELEY, CALIFORNIA, January 6, 2016 – At CES 2016 Spiral Groove is showcasing its **Revolution turntable** in the VTL Suite 30-102. The Revolution is designed to deliver extraordinary record playback and will be features as part of a complete ultrahigh-end music system.

The Revolution turntable is engineered using Spiral Groove's Balanced Force Design™ approach, aimed at achieving the most elegant equilibrium of materials, performance, function, manufacturability and beauty.

The body of the Revolution utilizes a low voltage/high-torque AC synchronous motor with an outboard sine-wave-generator power supply. The motor is decoupled from the rest of the turntable and elastomer-mounted in a machined one-piece motor mount, for exceptionally quiet record playback. Speed control is electronically selectable for 33-1/3 and 45 rpm.

The Revolution features a three-layer body made from two materials, forming a dense, rigid and well-damped, non-resonant platform to which the working parts of the turntable can be precisely mounted and isolated from one another.

The platter employs a truncated pyramid design with a graphite top plate and vibration-damping technologies drawn from Spiral Groove's Strange Attractor isolation feet, which refract, reflect and ultimately dissipate unwanted mechanical vibrations. The inverted sapphire disc/hardened steel bearing is the same as that used in Spiral Groove's flagship SG1.1 turntable.

Spiral Groove, 2606 9th Street, Berkeley, CA 94710

The Revolution's adjustable feet are customized Strange Attractors incorporating additional elastomer isolation technology.

The Revolution's removable armboard allows easy arm changes and the turntable will accommodate most tonearms up to 12 inches in length. At CES 2015 the Revolution will be on exhibit with the Spiral Groove Centroid Universal tonearm, an ultimate-performance tonearm built from materials selected for low mass, high strength and the ability to transfer mechanical energy away from the cartridge.

The Spiral Groove Revolution turntable is currently available at a suggested retail price of \$15,000.

Spiral Groove is distributed in the U.S. by Immedia, along with Canalis loudspeakers, Strange Attractors vibration control accessories and QUALIA & COMPANY audio components.

About Spiral Groove

Spiral Groove designs and manufactures turntables, pickup arms and accessories that embody the highest standards of precision engineering to convey music with exceptional fidelity and emotional involvement. The concept of Balanced Force Design is at the heart of every Spiral Groove product. The goal of Balanced Force Design is to achieve the most elegant equilibrium of materials, performance, function, manufacturability and beauty.

All Spiral Groove products are manufactured in Berkeley, California and distributed by Immedia. For more information please visit www.spiral-groove.com.
